

## Penetration Testing Agreement

This document serves to acknowledge an engagement between the Business Owner and Data Custodian of ..., and the college students of Fontys and their IT Coach.

Systems(s) to be tested: all

Testing Time Frame: (begin) 31-10-2022 (end) \_\_\_\_\_

Penetration Testing Components (see descriptions page 2). Indicate the testing components that are to be completed, by initial.

Component	Business Owner	Data Custodian
Gathering Publicly Available Information	<u>Sebas Quist</u>	
Network Scanning		
System Profiling		
Service Profiling		
Vulnerability Identification		

All parties, by signing below, accept and agree that:

1. The students of Fontys who have signed this contract will take reasonable steps to preserve the operational status of systems, but it cannot be guaranteed.
2. The students of Fontys who have signed this contract are authorized to perform the component tests listed above, at their discretion using appropriate tools and methods.
3. Test results are related to specific tests only. They indicate, but do not and cannot measure, the overall security posture (quality of protections) of an application system.

Signed:  (Business Owner)

Review/Closeout Discussion Completed (Date): \_\_\_\_\_

## Definitions

Data Custodian - The technical contact(s) that have operational-level responsibility for the capture, maintenance, and dissemination of a specific segment of information, including the installation, maintenance, and operation of computer hardware and software platforms.

Business Owner - The senior official(s) within a departmental unit (or his/her designee) that are accountable for managing information assets.

## Penetration Testing Component Descriptions:

1. Gathering Publicly Available Information - Researching the environment using publicly available data sources, such as search engines and websites.
2. Network Scanning - Performing automated sweeps of IP addresses of systems provided and/or discovered, from on-campus and off-campus.
3. System Profiling - Identification of the operating system and version numbers operating on the system, to focus subsequent tests.
4. Service Profiling - Identification of the services and applications as well as their version numbers operating on the system, to further focus testing on vulnerabilities associated with the identified services discovered.
5. Vulnerability Identification - Potential vulnerabilities (control weaknesses) applicable to the system are researched, tested, and identified.
